CREATOROPS & TOOL CONSOLIDATION

How We Build 30 Assets in <30 Minutes

High-velocity content marketing is not about hiring an army of copywriters. It is about building an automated, verifiable growth pipeline. Here is our architecture teardown.

CREATOROPS & TOOL CONSOLIDATION

Step 1: Source Normalization

Input ingestion parses raw case studies or transcripts, extracts core factual claims, and validates minimum substance to prevent shallow generation.

CREATOROPS & TOOL CONSOLIDATION

Step 2: Multi-Platform Generator

A Gemini 2.5 Flash orchestration layer generates platform-tailored formats: 9:16 vertical video scripts, 5-slide carousels, and thought-leadership posts simultaneously.

CREATOROPS & TOOL CONSOLIDATION

Step 3: Validation & Deduplication

Every asset is checked against ground truth to block hallucinations. A dual-layer SHA256 and Jaccard token deduplicator rejects repetitive content with >85% overlap.

CREATOROPS & TOOL CONSOLIDATION

Step 4: Media & Calendar Export

Local FFmpeg and Pillow render the MP4 videos and PNG slides, exporting a ready-to-schedule calendar.csv in 110 seconds. Review the code at github.com/athishsamy.
