GROWTH ANALYTICS & ALGORITHM BENCHMARKS

The Social Content Decay Curve

Understanding the algorithmic half-life of different platforms is the difference between stagnant reach and exponential compounding. Here is what the data proves.

GROWTH ANALYTICS & ALGORITHM BENCHMARKS

Platform 1: Fast-Decay Feeds (X/Threads)

Average half-life: 4 to 6 hours. Content peaks almost immediately and decays rapidly. Great for quick testing, but poor for sustained compounding discovery.

GROWTH ANALYTICS & ALGORITHM BENCHMARKS

Platform 2: Mid-Decay Feeds (LinkedIn)

Average half-life: 48 to 72 hours.
High-dwell carousels continue surfacing in 2nd-degree feeds for 3 full days as professional peers comment and save.

GROWTH ANALYTICS & ALGORITHM BENCHMARKS

Platform 3: Long-Tail Discovery (Shorts)

Average half-life: 3 to 14+ days. YouTube Shorts algorithm tests clips in batches. A video can suddenly experience its largest viewer surge 10 days after publishing.
